SUMMARY

Third-year B.Tech IT student (2024–2028) with a strong interest in AI/ML, deep learning, and data analytics. Skilled in Python, SQL, machine learning, data preprocessing, model evaluation and web dev with hands-on experience building AI-driven applications and deepfake detection systems. Seeking an internship to apply technical skills to real-world problems while contributing, learning, and growing in a collaborative environment.

SKILLS

- **Programming Languages:** Python, MySQL, JavaScript, C
- **Data Analysis & Visualization:** Pandas, NumPy, Matplotlib, Data Preprocessing, Statistical Analysis, Jupyter Notebook
- **Machine Learning:** Supervised Learning, Unsupervised Learning, Regression, Classification, Clustering, Feature Engineering, Model Evaluation, Scikit-learn
- **Web Development & Tools:** HTML, CSS, React, FastAPI, Git, GitHub, Linux

TECHNICAL PROJECTS

AI-Powered Career & Resume Platform | GitHub **June 2026**

Python, FastAPI, MySQL, React, TypeScript, Pandas, Scikit-learn, Supabase

- Built an AI-powered platform for resume analysis, personalized career guidance, and skill-based job recommendations.
- Implemented multi-source job verification to filter suspicious listings and help protect users from recruitment scams.
- Streamlines job discovery, reduces manual search effort, and helps users focus on relevant, verified internship and job opportunities.

AI-Driven Hyper-Local Business Advisor & Financial Structuring Assistant | GitHub **Sept 2026**

Python, Pandas, NumPy, Matplotlib, Scikit-learnt, FastAPI, React, JavaScript, MySQL, Vite, WebDev

- Designed an AI-powered business advisory platform that analyses local demand, market gaps, competition, pricing, and business risks to validate ideas for rural micro-entrepreneurs.
- Developed a data-to-recommendation pipeline integrating voice-first input, AI/ML analytics, SWOT and threat analysis, competitor mapping, financial structuring, loan/scheme matching, and personalized recommendations.

Deepfake Detection Using ADVO, U-Net & Hybrid GCN | GitHub **Oct 2026**

- Developed an experimental deepfake detection pipeline using the FaceForensics++ dataset.
- Implemented ADVO-inspired preprocessing, U-Net edge detection, and an approximate Hybrid GCN classifier.
- Used Python, PyTorch, and OpenCV for model development, training, and evaluation.
- Achieved 71.35% test accuracy and analysed limitations in fake-class detection.

EDUCATION

Samrat Ashok Rajkiya Engineering College **Mirzapur, Uttar Pradesh**

B.Tech in Information Technology, Dr. A.P.J. Abdul Kalam Technical University, Lucknow **2024 - 2028**

RESEARCH EXPERIENCE

Research Experience – Deepfake Detection

Guide: Prof. Arun Dubey, SAREC Mirzapur

- Studied and implemented an experimental deepfake detection approach based on ADVO, U-Net, and Hybrid GCN using the FaceForensics++ dataset.
- Conducted image preprocessing, edge detection, model training, and performance evaluation using Python and PyTorch.
- Analysed model limitations, class imbalance, and classification errors to identify areas for further research.

ACHIEVEMENTS & LEADERSHIP

- Selected among the Top 5 teams at the college level for Smart India Hackathon (SIH) 2026 as a member of Team Code Titans.
- Mentor at Computer Institute — Teach courses, guiding students and managing classroom learning & programming exercise.

CERTIFICATION

Supervised Machine Learning — DeepLearning.AI & Stanford University (Coursera) View Certificate **June 2026**
